- ✔ Generally reactive, responding after an attack occurs

- ✔ Business continuity and recovery
- ✔ Ensuring operational continuity despite attacks
- ✔ Includes disaster recovery plans, data backups, and incident response
- ✔ Proactive, planning for recovery and adaptation to potential threats

Where Cybersecurity Meets Innovation

Vision

To be a leading African born technology consulting firm that sets the global benchmark in cybersecurity, enterprise security, and digital intelligence solutions.

Mission

To deliver secure, innovative, and data driven IT solutions that enable organizations to protect their digital environments, leverage intelligence, and achieve sustainable growth.

Core Values

- Integrity
- Innovation
- Excellence
- Resilience
- Collaboration

Our Core Services

4IR cyber security

We broad and provides partners and clients access to various services such as Penetration Testing, Vulnerability Assessments, IT Security Risk Assessments, IT Audits, IT Governance, IT Legal and Compliance

Enterprise Security Architecture

Architectural designs must always be up to date to provide the smallest possible attack . It is trivial to keep an eye on whether the current security architecture aligns with the company's strategy.

Data Ware House

Today, the challenge isn't collecting data it's knowing what to do with it. This is where a data warehouse can make a big difference. Data warehouse solutions are increasingly essential as organizations strive to make the best use of their data.

Business Intelligence

We provides data and analytics services to our clients by analyzing business data, compiling reports and building visual models to explain and illustrate trends and relationships hidden in vast data sets within the organization using Management Information Reporting, Data Analytic Methodology and Case Studies

System Development

The purpose of Service System Development (SSD) (CMMI-SVC) is to analyze, design, develop, integrate, verify, and validate service systems, including service system components, to satisfy existing or anticipated service agreements, defects and problems identified during both service delivery and incident resolution and prevention processes.

Program Management

We coordinates the delivery of entire project portfolios, benefiting our clients in ways that wouldn't be possible if managed individually. Our focus is on getting the very best return for clients on their asset portfolio. We achieve this by bringing together consulting, delivery and operations into a seamless programme management capability managing the entire asset lifecycle

Disaster Recovery

Strategic technology planning doesn't just mean implementing future technologies. It also involves delving into your existing solutions to analyse vulnerabilities, and plan for the worst case scenario – what would happen if your business fell victim to a cyberattack, a data breach, or even a natural disaster.

HR systems

Our solutions include an eRecruitment system for streamlined hiring, a digital attendance register for field workers equipped with geolocation and biometric verification to ensure accuracy and accountability, and an eMemo system that simplifies internal decision making through digital approvals and progress tracking.
